2013 Heat Related Fatalities

In 2013, 92 people died as a result of extreme heat, down from 155 fatalities in 2012, well above the 10-year average of 123. In 2013, the most dangerous place to be was in a permanent home, likely with little or no air conditioning, where a reported 40 (44%) of deaths occurred. Nevada numbered by far the most heat victims, 42, followed distantly by New York with 10 heat related deaths. As in the past, extreme heat most strongly affected adults aged 50+, with 64 deaths (70%). Once again, more males, 58 (63%), than females, 30 (33%), were killed by heat.
